TrustLedger product versions

Living commercial/public labels. For plan packaging, evaluation, and agent scripts see `docs/PLATFORM_STRATEGIC_BRIEF.md`.

Version 001 (current — live resolution desk)

Name in UI / public: TrustLedger **Version 001**

What it is: Grievance / resolution desk + role workspaces + trial/pay + Cloud-backed ops for paying Owners.

Included	Notes
Role dashboards (community / contractor / client / admin)	Trial own-data or live Cloud
Projects (light) + Incidents / grievance intake	Core pain wedge — GO LIVE Done
AI assist (suggest → human apply)	Mock default; Cloud path when configured
14-day own-data trial + Paystack subscribe	Sample /demo retired → /product
Live login + email verification	Buyers after provision (PLATFORM_OPERATOR_ONLY=0)
Marketing home, assessment, Ops plane	Not the full ESIP MVP

Public line:

Version 001 is live — the trust & grievance resolution desk. Stakeholder Intelligence (registry, engagements, commitments) is available on entitled Version 002 surfaces and continues to deepen on Cloud.

Version 002 (active — Stakeholder Intelligence core)

Goal: Close the gap vs market tools on the SRM engine buyers actually need.

Domain	Outcome	Posture (2026-07-23)
Geo	SA hierarchy + place links; socio-econ layers	ZA pack seeded; Stats SA deferred
Stakeholders	Registry (people, orgs, influence, interests)	UI + Cloud DocType/BFF
Engagements	Meetings, consultations, minutes/actions	UI + Cloud DocType/BFF
Commitments	Promise → owner → deadline → evidence → closed	UI + Cloud DocType/BFF

Domain	Outcome	Posture (2026-07-23)
Stronger grievance	Fuller lifecycle on Frappe	UI stamps; Cloud stamps next
Reports	Operational + executive packs	Dual hub shipped; live SI bind next
Intelligence / ESG	Indicators, trust/ESG depth, stronger AI	Demo indicators; live Grok deferred

Public line:

Version 002 — Stakeholder Intelligence core on Cloud for entitled plans. Still deepening versus the full Engineering Documentation Series blueprint — Version 001 remains the resolution desk.

Version 003+ (later)

Public portal, offline/mobile, GIS editing, marketplace — TEDS “future scope”. Do not market as imminent.

Rules

- 1. Never market Version 002/003 capabilities as “fully available” until the domain is end-to-end (UI + durable data path). Label illustrative data honestly.
- 2. Soft commercial honesty: Practitioner ≠ full SI; Project/Institutional carry the SRM engine (docs/PLATFORM_STRATEGIC_BRIEF.md §5).
- 3. Version badge stays visible in the app shell and marketing footer.
- 4. Sample guest demo is discontinued (ADR-033).
