

TrustLedger Roadmap V002

TrustLedger · Generated from repository documentation · Internal use

Version 002 — hastened build roadmap

North star: TEDS Volume 1 MVP domains that close the market gap.
Policy: Soft launch may wait until V002 core is credible (ADR-023).
Active packet: Ops smoke + buyer verification of Cloud SI (ensure DocTypes → smoke → live CRM create). **D1/D2** sample demo retired. **GO LIVE Done**. Deferred: Stats SA + live Grok.

Priority order (do not reshuffle without reason)

- 24a Geo foundation (SA hierarchy + link fields + ingest hook)
 - 24b Stakeholders registry
 - 24c Engagements
 - 24d Commitments
 - 24e Stronger grievance (Frappe lifecycle)
 - 24f Reports + executive packs
 - 24g Intelligence / ESG indicators + stronger AI

Geo first unlocks your existing location + socio-economic datasets as a **selling proof**, then stakeholders/engagements/commitments attach to place.

Packets

Packet	Scope	Frontend	Frappe / data	Target
24a	Geo foundation	Types, mock SA tree, /app/geo, place picker fields	DocType / JSON ingest for wards + socio-econ keys	Done (ZA pack seeded)
24b	Stakeholders	List/detail/create on Cloud	TL Stakeholder DocType + BFF	Done (Cloud SI)
24c	Engagements	Capture hub + Cloud persistence	TL Engagement DocType + BFF	Done (Cloud SI)
24d	Commitments	Register + status board on Cloud	TL Commitment DocType + BFF	Done (Cloud SI)
24e	Stronger grievance	Status machine UI + verify/close	Incident workflow states on Cloud	Done (demo; Cloud stamps next)
24f	Reports	Activity + Reports dashboards; monthly / executive / board packs; Owner desk grants	Pack access + evidence writer	Done
24g				

Packet	Scope	Frontend	Frappe / data	Target
	Intelligence / ESG	Indicator cards + AI briefs on live indicators	Indicator store + Grok briefs	Done (demo; Stats SA / Cloud next)

Aggressive solo calendar: ~10–14 weeks to a **demoable V002 core** (mock+ingest OK). Faster if geo/socio-econ files land in week 1 and Frappe DocTypes are created in parallel on Cloud.

What you provide (unblocks speed)

1. Geo files (wards / municipalities / coordinates) — preferred GeoJSON or CSV with codes
2. Socio-economic indicators for SA (CSV: area code + metrics)
3. Priority municipality/wards for the first demo dataset (e.g. one metro + sample wards)

Drop files under `data/geo/` (git-lfs or private store if large) and tell the agent path.

Public expectation copy (reuse)

Website / video:

“TrustLedger **Version 001** is the live resolution desk. **Version 002** adds the Stakeholder Intelligence core competitors miss — registry, engagements, commitments, South African geo & socio-economic depth, and executive ESG packs.”

Do not say: “Full ESIP / GIS editing / public portal available today.”
