

TRUSTLEDGER SRM

SEP GENERATION SPECIFICATION

Version 1.0 — Tender-to-Social-Engagement Intelligence Engine

Functional and methodological baseline for rebuilding the Social Engagement & Participation module.

Document Control

Field	Specification
Document	SEP Generation Specification
System	TrustLedger Stakeholder Relations Management (SRM)
Module	Social Engagement & Participation (SEP)
Version	1.0
Status	Development baseline
Primary purpose	Convert uploaded tender/project source documents into project-specific, tender-grade SEPs
Core principle	Analyse first; design second; write last

1. Executive Design Decision

The SEP module must not be treated as a long-form document generator. Its core function is to perform structured tender analysis and convert that analysis into a defensible Social Engagement Plan. The final document is an output of the intelligence process.

Required transformation:

Tender → Requirements extraction → Project classification → Social context analysis → Stakeholder intelligence → Social risk/impact analysis → Method selection → Participation design → Implementation programme → M&E/evidence design → Compliance audit → QA → Final SEP.

2. Lessons from the Current Baseline SEP

The uploaded Relocation and Migration Plan SEP is a useful baseline test case. It contains strong elements—project facts, stakeholder categories, sequencing, grievance stages, risk mitigations, local economic participation, indicators and explicit limitations—but it moves too quickly from tender facts to a compact operating plan.

The rebuilt engine must retain those strengths while adding analytical depth, methodological justification, participation architecture, evidence traceability, tender compliance and automated quality assurance.

Current Strength	Required Upgrade
Explicit tender facts and limits	Add formal fact/inference/proposal provenance.
Stakeholder categories	Create living stakeholder intelligence profiles.
CBPR section	Add method selection logic and substantive PRA/PLA/CBPR application.
Engagement schedule	Add purpose, method, output, decision linkage and indicators.
Grievance workflow	Link grievances to social risk and early warning.
Operational indicators	Add output and outcome indicators.
Short client summary	Add executive analysis and tender compliance evidence.

3. Non-Negotiable Generation Principles

- Tender-grounded: project facts originate in the uploaded tender or explicitly supplied client facts.
- No fabrication: never invent names, numbers, sites, budgets, dates, approvals, stakeholders or commitments.

- Fact/assumption separation: classify important statements as tender fact, client fact, regulatory reference, professional inference, proposed methodology, or to-be-confirmed.
- Project-specific methodology: methods are selected because of identified project needs.
- Participation over consultation: distinguish informing, consulting, involving, collaborating and empowering.
- Decision linkage: show how stakeholder input can influence project decisions.
- Inclusion by design: explicitly consider vulnerable and less-visible groups.
- Evidence-based: activities have outputs, records, indicators and verification mechanisms.
- Living-plan logic: allow adaptation as field evidence changes the project understanding.
- Tender compliance: every identifiable SEP-related tender requirement is traceable to a response.
- Professional restraint: do not present unsupported legal advice or guarantee approvals.

4. SEP Generation Pipeline

Stage	Engine Function	Required Output
01	Tender ingestion	Normalised text, tables, headings and source metadata.
02	Requirements extraction	Scope, deliverables, stakeholders, geography, duration, standards, reporting and evaluation requirements.
03	Project classification	Sector, impact profile, displacement, complexity, vulnerability and research intensity.
04	Social context analysis	Affected people, social systems, dependencies, vulnerabilities, risks and opportunities.
05	Stakeholder intelligence	Stakeholder register plus influence, interest, impact, vulnerability and relationships.
06	Method selection	PRA/PLA/CBPR and other methods selected against objectives.
07	SEP architecture	Objectives, participation levels, activities, communications, grievance, risks and M&E.
08	Evidence architecture	Required records, verification, commitments and traceability.
09	Tender compliance audit	Requirement-to-SEP mapping.
10	Quality assurance	Completeness, consistency, unsupported claims and realism checks.
11	Document generation	Professional final SEP assembled from approved structured content.

5. Tender Requirements Extraction

Domain	What the engine must extract
Tender identity	Tender number, title, procuring entity and issuing entity.
Project identity	Project name, sector, location, programme and phase.
Purpose/objectives	Why the assignment exists and intended outcomes.
Scope	Tasks, activities, geographic and stakeholder coverage.
Deliverables	Reports, plans, registers, meetings, studies and outputs.

Duration	Contract period, milestones, deadlines and sequencing constraints.
Stakeholders	Named institutions, communities, beneficiaries, authorities, contractors and funders.
Social requirements	Participation, consultation, local content, vulnerability, resettlement, livelihood and related requirements.
Regulatory references	Only sources explicitly cited or requiring verification.
Reporting	Frequency, formats, recipients and approvals.
Evaluation criteria	Technical scoring elements relevant to social methodology.
Evidence requirements	Registers, minutes, photographs, surveys, GIS, reports and other evidence.

6. Project Classification Engine

Dimension	Examples
Sector	Housing; infrastructure; transport; water; energy; mining; education; health; municipal; research; environmental.
Social-impact profile	Low; moderate; high; critical.
Displacement	None; physical; economic; access-based; mixed.
Stakeholder complexity	Low; medium; high; multi-level.
Conflict sensitivity	Low; medium; high.
Vulnerability intensity	Low; medium; high.
Participation intensity	Inform; consult; involve; collaborate; empower.
Research intensity	None; diagnostic; participatory research; longitudinal.
Implementation horizon	Short; medium; long-term.

7. Social Context & Impact Analysis

This is the analytical bridge between the tender and the SEP. The engine must identify not only what the project is, but what it means socially.

Analysis Area	Questions
Affected people	Who may experience benefits, disruption, displacement, exclusion or livelihood effects?
Social systems	What formal and informal institutions influence the project?
Governance	Which municipal, traditional, community or institutional structures matter?
Livelihoods	Could access, employment, trading, land or services be affected?
Vulnerability	Which groups may face disproportionate impacts or participation barriers?
Trust/history	Are previous projects, promises, grievances or distrust indicated?
Conflict	What interests may compete and where could conflict emerge?
Opportunity	Where can participation, local employment, enterprise or capacity building add value?

7.1 Social Risk & Impact Matrix

Field	Required Content
-------	------------------

Issue/impact	Potential social effect.
Cause/driver	What creates the risk/impact.
Affected stakeholders	Specific groups, not simply 'community'.
Geographic area	Relevant location.
Likelihood/severity	Defined risk scale.
Risk rating	Calculated or professionally assigned.
Early warning trigger	Observable sign that risk is increasing.
Mitigation	Practical management response.
Participation response	How stakeholders participate in managing it.
Owner	Responsible role/organisation.
Evidence	How implementation/outcome is verified.

8. Stakeholder Intelligence Specification

Attribute	Required Fields
Identity	Name/category, organisation, type, geographic area.
Interest	Interests, concerns and dependencies.
Influence	Influence over decisions, implementation or legitimacy.
Impact	How the project may affect the stakeholder.
Vulnerability	Relevant impact/participation vulnerability.
Representation	Who represents the group and how representation is validated.
Relationship	Relationship with client, project and other stakeholders.
Engagement objective	What engagement must achieve.
Participation level	Inform/consult/involve/collaborate/empower.
Method/frequency	Method and timing.
Risks	Stakeholder-specific risks or sensitivities.
Commitments/sentiment	Promises, concerns, sentiment and trend where measured.
Evidence	Records supporting the profile.

9. Participatory Methodology Library

The method library must store definitions, purposes, selection criteria, participant requirements, procedures, outputs, evidence requirements and limitations.

Method	Primary role	Examples	Selection rule
PRA	Participatory diagnosis and local knowledge generation.	Mapping; transects; seasonal calendars; social/institutional mapping; ranking; timelines; problem trees.	Use for grounded understanding of context, assets, vulnerabilities, services, livelihoods and priorities.
PLA	Participatory learning, planning, action, monitoring and adaptation.	Prioritisation; action planning; reflection; participatory monitoring; learning reviews.	Use when participation must continue through planning, implementation and adaptive management.
CBPR	Equitable community-research partnership and co-production of knowledge.	Co-designed research; data collection; validation; interpretation; dissemination.	Use for formal participatory research, baselines, impact assessment, community-defined indicators and longitudinal learning.

9.1 Method Selection Matrix

Objective	Preferred method	Example output
Understand local conditions	PRA	Validated social/context map.
Identify priorities	PRA + PLA	Priority matrix and rationale.
Co-design responses	PLA	Action plan.
Conduct participatory research	CBPR	Co-produced research findings.
Validate findings	PLA + CBPR	Validated findings and documented differences.
Participatory monitoring	PLA	Monitoring and learning record.
Impact assessment	CBPR	Participatory impact findings.
Social-risk identification	PRA + PLA	Risk profile and early-warning triggers.

10. Participation Framework

Level	Meaning	Required question
Inform	Provide accurate, accessible information.	What must stakeholders know?
Consult	Seek views and concerns.	What input is required and how will it be considered?
Involve	Work directly with stakeholders during development.	Which parts can they shape?
Collaborate	Joint problem solving or decision development.	What can be jointly designed or agreed?
Empower	Defined decision authority or influence.	What authority is actually delegated?

Mandatory rule: every major stakeholder group must have an explicit participation objective. The engine must not describe all stakeholders as simply 'consulted'.

11. Engagement Programme Design

Field	Required
Activity	Clear activity name.
Purpose	Why the activity is necessary.
Trigger/milestone	When and why it occurs.
Participants	Specific stakeholder groups.
Method/tool	Selected methodology and tool.
Inputs	Information/evidence needed.
Facilitation	How participation will be enabled.
Output	Concrete product/finding.
Decision linkage	How output influences action/decision.
Owner	Responsible role.
Evidence	Required record.
Indicator	Performance/effectiveness measure.

12. Inclusion & Representation

- Treat the community as heterogeneous unless the source establishes otherwise.
- Identify groups that may experience different impacts.

- Identify barriers such as mobility, disability, language, timing, distance or care responsibilities.
- Specify alternative engagement mechanisms where public meetings are insufficient.
- Record who participated and who was not reached.
- Distinguish legitimate representation from self-appointed representation.
- Protect sensitive personal information through appropriate access controls.

13. Communications Strategy

Audience	Message	Channel	Language/ accessibility	Frequency	Owner	Evidence
[Audience]	[Message]	[Channel]	[Requirement]	[Frequency]	[Role]	[Record]

14. Grievance & Social Issue Management

Stage	Required function
Prevention	Explain processes, expectations, rights and channels.
Lodgement	Accessible channels and one case reference.
Acknowledgement	Receipt and responsible owner within applicable SLA.
Classification	Categorise issue and assign severity/risk.
Investigation	Record account, facts, evidence and project information.
Response	Communicate proposed action and timeframe.
Resolution	Confirm action and stakeholder response where practicable.
Escalation	Route unresolved matters through the approved process.
Closure	Record verification and closure evidence.
Trend analysis	Identify repeated grievances as potential systemic social risks.

15. Social Risk & Early Warning

Signal	Potential interpretation	System response
Repeated complaints on same issue	Systemic project problem	Create/escalate social risk.
Rapid sentiment decline	Trust deterioration	Trigger management review.
Increasing meeting disruption	Conflict escalation	Escalate engagement/conflict response.
Low participation from affected group	Exclusion/access barrier	Redesign engagement.
Unfulfilled commitments	Credibility/legitimacy risk	Flag commitment risk.
Disputed representation	Governance/legitimacy issue	Validate representation before decisions.

16. Monitoring, Evaluation & Learning

Level	Question	Example
Input	Were resources/capacity available?	Facilitation team appointed.
Process	Did planned engagement occur?	Engagement completed.
Output	What did participation produce?	Validated stakeholder map.
Outcome	Did participation change/improve something?	Recommendation incorporated into a project decision.

Indicators must be generated with definition, baseline, target, frequency, evidence source and owner. Where baseline or target is unknown, mark it as TBC rather than inventing a value.

17. Evidence & Traceability Architecture

Evidence type	Example	Status
Tender fact	Tender states contract duration.	Verified from source.
Client fact	Client supplies confirmed site name.	Client supplied.
Regulatory reference	Instrument explicitly cited in tender.	Source-based; legal verification may remain necessary.
Professional inference	Potential conflict identified from project context.	Inference, not fact.
Proposed methodology	Participatory host-community assessment recommended.	Proposed.
To be confirmed	Household count absent from tender.	Field/client confirmation required.
Field finding	Validated community map.	Added after implementation.

18. Tender Compliance Matrix

Tender requirement	Source reference	SEP response	SEP section	Evidence/deliverable	Status
[Requirement]	[Tender page/section]	[Response]	[Section]	[Evidence]	Covered / Partial / Missing

- Every explicit SEP-related requirement must be mapped.
- Partially addressed requirements must be flagged before final generation.
- Missing critical requirements should block approval or issue a prominent warning.
- Recommendations added through professional judgement must be distinguished from tender requirements.
- The final SEP must not claim compliance where the matrix shows only partial coverage.

19. Standard Tender-Grade SEP Structure

- Cover Page; Document Control; Executive Summary
- 1. Introduction
- 2. Project Overview
- 3. Understanding of the Assignment
- 4. Tender Requirements & Compliance Matrix
- 5. Social Context and Impact Analysis
- 6. Stakeholder Identification and Analysis
- 7. Stakeholder Participation Framework
- 8. Social Risk and Opportunity Assessment
- 9. Participatory Methodology — PRA, PLA and CBPR
- 10. Engagement Strategy
- 11. Community Participation Programme
- 12. Inclusion and Vulnerability Strategy
- 13. Communication Strategy
- 14. Grievance Redress Mechanism

- 15. Social Risk and Early Warning
- 16. Local Economic / Empowerment Participation
- 17. Monitoring, Evaluation and Learning
- 18. Reporting Framework
- 19. Roles and Responsibilities
- 20. Implementation Schedule
- 21. Resources and Capacity
- 22. Data Management and Evidence
- 23. Quality Assurance
- 24. Assumptions, Dependencies and Limitations
- 25. Conclusion
- Appendices: Stakeholder Register; Engagement Matrix; Risk Register; Grievance Workflow; Participation Tools; Indicators; Reporting Templates; Consultation Record; Commitment Register.

20. Automated Quality Assurance

QA test	Pass condition
Completeness	Required sections populated; justified exceptions only.
Tender alignment	All relevant requirements mapped.
Fact integrity	No unsupported project facts.
Method integrity	Each methodology has purpose and selection rationale.
Stakeholder completeness	Affected, influencing, vulnerable, governance and delivery groups considered.
Participation quality	Activities state what stakeholders can influence.
Risk coherence	Major risks have response, owner and monitoring logic.
Grievance coherence	Process aligns with project and contract requirements.
M&E coherence	Process, output and outcome measures used where appropriate.
Schedule realism	Activities fit duration and dependencies.
Internal consistency	Names, dates, sites, durations and terminology agree.
Legal restraint	No unsupported legal conclusions or guarantees.
Evidence traceability	Important claims and planned outputs have evidence paths.
Professional quality	Specific, decisive consultancy language; minimal generic filler.

21. Internal Generation Objects

Object	Purpose
TenderIntelligence	Structured tender facts and requirements.
ProjectProfile	Sector, geography, duration, complexity and impact profile.
SocialContextProfile	Social conditions, dependencies, vulnerabilities and opportunities.
StakeholderProfile	Stakeholder intelligence and engagement requirements.
SocialRisk	Risk/impact, trigger, mitigation, owner and evidence.
ParticipationObjective	What participation must achieve.
MethodSelection	Method/tool and rationale.
EngagementActivity	Operational engagement design.
CommunicationPlan	Audience/message/channel/frequency.
GrievanceFramework	Issue-management workflow and service levels.
Commitment	Promise/action, owner, date, evidence and status.

Indicator	M&E measure and evidence source.
ComplianceItem	Tender requirement mapped to SEP response.
QAResult	Automated quality finding and severity.
SEPDocument	Final rendered document assembled from approved objects.

22. Baseline Test Case — Relocation & Migration Plan

The first implementation test should use the uploaded Relocation and Migration Plan. The existing output identifies project-affected households, economically displaced people, informal occupiers/tenants, host community, vulnerable PAPs, traditional authority, municipality, contractor and other stakeholders. It also includes census sequencing, host consultation, grievance stages, risks, local economic participation and indicators.

The rebuilt engine must additionally produce:

- A tender compliance matrix showing which relocation/engagement requirements are addressed.
- A social impact matrix distinguishing physical displacement, economic displacement, access impacts, vulnerability and host-community effects.
- A method-selection matrix explaining why PRA, PLA and CBPR are used at different stages.
- A participation matrix showing what each stakeholder group can influence.
- A detailed participatory census and validation methodology.
- A host-community participation strategy, not merely a host meeting.
- A social-risk early-warning framework linked to grievances and stakeholder sentiment.
- An outcome-focused M&E framework.
- A complete evidence and commitment architecture.
- A professional implementation schedule and responsibility matrix.

23. Definition of Done — SEP Generator v1.0

- Ingest a tender and extract structured project requirements.
- Identify material social and stakeholder requirements.
- Generate a project-specific stakeholder intelligence profile.
- Identify major social risks and participation implications.
- Select and justify PRA, PLA and CBPR where appropriate.
- Generate a participation framework and engagement programme.
- Generate communication and grievance structures proportionate to the assignment.
- Generate process, output and outcome indicators.
- Maintain fact/inference/proposal distinctions.
- Generate a tender compliance matrix.
- Run QA and identify missing or unsupported content.
- Produce a coherent professional SEP without internal contradictions.
- Maintain an audit trail from tender requirement to SEP section to planned evidence.

24. Recommended Development Sequence

Phase	Workstream	Goal
-------	------------	------

A	Data model	Create internal objects and relationships.
B	Tender parser	Improve extraction and requirement classification.
C	Method library	Encode PRA/PLA/CBPR and selection rules.
D	Analytical engine	Build social context, stakeholder and risk analysis.
E	SEP planner	Generate structured participation and implementation objects.
F	Compliance + QA	Build traceability and automated quality checks.
G	Renderer	Generate the professional final document.
H	Validation	Run the relocation tender as Test Case 01 and iterate.

25. Methodological Reference Base

- Robert Chambers — Participatory Rural Appraisal (PRA) and Participatory Learning and Action (PLA).
- Institute of Development Studies (IDS) — PRA/PLA and participatory practice literature.
- Food and Agriculture Organization (FAO) — participatory appraisal methods including mapping, transects, seasonal calendars, ranking, Venn diagrams and triangulation.
- Israel, B.A., Schulz, A.J., Parker, E.A. & Becker, A.B. — foundational Community-Based Participatory Research literature.
- Centers for Disease Control and Prevention (CDC) — community-based participatory research and community engagement literature.
- The TrustLedger method library should be expanded only from credible methodological sources and must preserve distinctions between participatory appraisal, participatory learning/action and participatory research.
