

TrustLedger Platform Strategic Brief

TrustLedger · Generated from repository documentation · Internal use

TrustLedger — Platform Strategic Brief

Status: Living document (authoritative for plan packaging, agent training, and ongoing evaluation)

As of: 2026-07-23

Deploy truth (Production): `https://trustledger-frontend-pi.vercel.app` · `deploySha` tracked on `/api/health`

Cloud SoT: `https://app.trustledger.co.za` (Frappe Cloud only — Interserv retired)

Product name in UI: TrustLedger only

Use this brief when packaging plans, training public-facing agents, evaluating what to keep/improve/cut, and deciding upgrades. Code matrices in `src/config/entitlements.ts` and maturity in `src/lib/tedsMaturity.ts` override stale markdown if they diverge.

1. Executive summary — what we have achieved

TrustLedger has moved from a **demo-first Vercel prototype** to an **operational-grade commercial platform**:

1. **Version 001 resolution desk is live** for paying customers on Frappe Cloud (projects, incidents/grievance desk, AI suggest→apply→save, reports shell).
2. **Version 002 Stakeholder Intelligence is the SRM engine** — registry, engagements, and commitments now have Cloud DocTypes + live BFF CRUD (TL Stakeholder / TL Engagement / TL Commitment). Without this layer there is no durable Stakeholder Relationship Management.
3. **Commercial path works end-to-end:** marketing → assessment/quote/contact → `/trial` or `Paystack /pay` → email verification → trial workspace or live Owner login → Ops finance/billing.
4. **Sample demo desk is retired** (ADR-033). Public education is `/product`; buyers use own-data trial or live Cloud — never fictional `INC-*` bleed into customer desks.
5. **Platform Ops command centre** is real: readiness ladder, Owner provision, DocType ensure/smoke, charge-due, Executive Board view.
6. **GO LIVE Done (2026-07-23):** lockdown lifted for buyers (`PLATFORM_OPERATOR_ONLY=0`); auto-provision, Paystack, Resend OTP, cron, and Cloud reachability are green on Production health (reCAPTCHA keys still optional/deferred).

Honest maturity: TEDS MVP domains average $\approx$ **58%** realised in product (`src/lib/tedsMaturity.ts`). Market label stays **Version 001** for the desk; **Version 002** SI is Cloud-usable but not yet “full TEDS blueprint.”

2. Step-by-step journey (how we got here)

Agents and humans should understand this sequence — it explains why the architecture looks the way it does.

Phase A — Demo-first proof (Packets 00-10)

Step	Achievement	Why it mattered
A1	Full /app shell, four roles, mock domain	Prove the product story before Cloud
A2	AI suggest→apply→save pattern	Locked human-in-the-loop (ADR-006)
A3	Design system “Field ledger”	Brandable, non-generic UI (ADR-007)
A4	Soft lead gate / assessment	Acquisition funnel without forcing signup

Phase B — Frappe-ready frontend (Packets 11-14)

Step	Achievement	Why it mattered
B1	dataMode + Frappe client + method contract	Avoid rewrite when Cloud arrives
B2	Live adapters with mock fallback (ADR-010)	Resilience; later refined so customers never get mock INC-*
B3	Auth bridge stub → live login	Path to Cloud sessions

Phase C — Funnel, Ops, commercial shell (Packets 15-23)

Step	Achievement	Why it mattered
C1	UTM, SEO, mobile nav	Marketable surface
C2	Ops /ops/* allowlist plane	Operator control ≠ customer CRM
C3	Paystack on Vercel (ZAR)	Money path without waiting for Frappe billing
C4	/trial, /pay, /quote, Plan Owner model	Sellable wedge under soft launch
C5	Capability entitlements (ADR-024)	Plan packaging switchboard separate from UI sprawl

Phase D — Tenancy → Cloud operational grade (T1-T5 + OD-1→GO LIVE)

Step	Achievement	Why it mattered
D1	Org store, seats, invites, media quotas	Browser tenancy while Cloud catches up
D2	Customer/User SoT + Owner provision	ACCESS_MODEL reality on Frappe
D3	TL Project / Incident / Evidence + File	Durable case artefacts
D4	Paystack → auto-provision + migrate org	Multi-device durable ops
D5	Day-14 charge-due cron + entitlement gate	Billing without babysitting
D6	Lift buyer lockdown	GO LIVE Done

Phase E — Stakeholder Intelligence + public honesty (24a-24g + ADR-033)

Step	Achievement	Why it mattered
E1	ZA geo pack, CRM, engagements, commitments, grievance UI, reports, indicators	V002 surfaces buyers expect
E2	Cloud SI DocTypes + <code>/api/frappe/si</code>	SRM engine on Cloud — not just demo boards
E3	Retire sample <code>/demo</code> → <code>/product</code>	Stop competing with trial; stop INC-* bleed
E4	Access email verification (OTP / activate link)	Inbox proof before platform access
E5	Launch hardening + watchlist	First-days operational discipline

3. Architecture snapshot (frontend + backend)

3.1 Frontend (this repo)

Layer	Location	Role
Marketing / funnel	<code>/</code> , <code>/product</code> , <code>/trial</code> , <code>/pay</code> , <code>/assessment</code> , <code>/quote</code> , <code>/contact</code>	Acquisition & education
Product shell	<code>/app/*</code>	Trial or live workspace
Ops plane	<code>/ops/*</code>	Platform Operator only (PLATFORM_OPERATOR_EMAILS)
BFF APIs	<code>/api/*</code> , <code>/auth/live/*</code>	Secrets stay server-side
Domain services	<code>src/services/*</code>	Mode-aware list/get/save
Entitlements	<code>src/config/entitlements.ts</code>	What each plan can open in nav
Design system	<code>docs/DESIGN_SYSTEM.md</code>	Field ledger tokens & type

Workspace modes (post ADR-033):

Mode	Meaning	Data
trial	14-day own-data browser workspace	tl-org-data / local stores — no demo seed
live	Frappe Cloud session (sid)	Cloud DocTypes + SI BFF; empty Cloud stays empty
demo	Retired for public entry	Lingering cookies cleared from <code>/app</code> → <code>/product</code>

3.2 Backend (Frappe Cloud)

Asset	Purpose
Customer + Plan Owner User	Commercial SoT + login

Asset	Purpose
Custom entitlement fields	trial / active / past_due / cancelled
TL Project, TL Incident, TL Evidence	Resolution desk artefacts + File
TL Stakeholder, TL Engagement, TL Commitment	SRM engine (SI-Cloud)
Optional srm_core methods	Preferred when installed; frontend falls back / uses resource BFF

Hard rule: LLM / Grok keys never in the browser. AI is suggest→apply→save; report briefs use local evidence composer (never Cloud month-end templates).

3.3 Production health gates (evaluate continuously)

From GET /api/health → launch:

Gate	Meaning
lockdownLifted	Buyers may use /login/live
frappeOwnerIssuance / frappeAutoProvision	Owner create path on
paystack	Checkout + webhooks possible
cronSecret	Day-14 charge-due schedulable
resend / accessVerificationReady	OTP / activation email path
recaptcha	Optional spam hardening (deferred if false)

Ops mirror: /ops/readiness.

4. Platform inventory — evaluate on an ongoing basis

Use this section in monthly reviews. Update statuses; do not delete history — move rows between columns with a date note in docs/CHANGELOG_INTERNAL.md.

4.1 What works (keep, sell, train on)

Area	Evidence	Plan relevance
Grievance / incident desk	Live UI + TL Incident path; verify/ close stamps in UI	All plans (core)
Projects (light)	List/detail; Cloud DocType exists	All plans
Stakeholder registry	Create/list; Cloud SI BFF	Project + Institutional (+ addon_crm)
Engagements	List/detail/capture apply; Cloud SI	Project + Institutional (+ addon_commitments pack)
Commitments board	Promote from engagements; Cloud SI	Project + Institutional
Capture hub	Minutes → AI extract → apply	Project + Institutional

Area	Evidence	Plan relevance
Trial own-data	/trial empty workspace	Acquisition
Paystack trial authorize	Card on file → day-14 charge	Practitioner + Project
Live login + email OTP	Resend when configured	Paying / provisioned Owners
Ops provision + DocType ensure/smoke	/ops/accounts	Operator only
Dual reports hub	Activity vs packs (ADR-028)	Pack tier by plan
Public /product onboarding	Replaces sample demo	All public agents
Brand / design system	TrustLedger field ledger	All surfaces

4.2 Needs improvement (invest next)

Area	Gap	Suggested action
Stale “demo” copy in product UI	Capture/projects/settings still say demo	Copy sweep — say trial/live/Cloud
Project/incident continuous Cloud save	Stronger on migrate/smoke than every UI save	Wire save → productCloud / srm_core consistently
srm_core method dependency	Live list may 404 until app installed	Prefer resource BFF pattern (as SI) or install srm-core
Geo depth	ZA pack seeded; lat/Ing & Frappe Geo DocTypes incomplete	Enrich wards; optional Cloud sync
Grievance Cloud stamps	UI stamps exist; TL Incident lifecycle fields incomplete	Mirror process stamps on Cloud
CRM relationships	No graph / merge / influence matrix	V002 deepening packet
Report packs from live SI/geo	Composer uses local evidence	Bind packs to Cloud lists
Ops analytics (23b-d)	Reports/accounts/support depth “Planned”	Schedule Ops packets
Invite multi-device	Browser seats until Cloud User seats	Cloud seat issuance
Doc drift	TEDS_MATURITY_REPORT.md, VERSIONING.md, PUBLIC_LAUNCH.md lag code	Sync after each GO packet
Partner logos / Ops staff wellbeing	Placeholders	Replace or hide from public

4.3 Not working / not ready (do not claim in sales)

Area	Status	Public language
Stats SA socio-economic ingest	Deferred	“Roadmap — indicators today are illustrative”
Live Grok via srm-core	Deferred / mock default	“AI assist — human applies every suggestion”

Area	Status	Public language
Full ESIP / GIS editing	V003+	Never claim imminent
Public community portal	V003+	Not available
Native mobile apps	None — responsive web only	“Works in mobile browser”
Offline-first field sync	Not shipped	Do not promise
Client co-branding exports	Future Institutional	Sales only if roadmap-dated
Ops CSV reports / wellbeing telemetry	Scaffold	Internal only

4.4 Discontinue / do not revive

Item	Decision	Reason
Public sample / demo guest desk	Discontinued (ADR-033)	Bleed risk; confuses trial; weakens SRM story
Interserv / alternate Frappe hosts	Discontinued	Single SoT: app.trustledger.co.za
AccordBridge dual branding	Discontinued	TrustLedger only
Auto-enter fictional INC-* for buyers	Discontinued	ADR-029 / launch hardening
Marketing Version 002 as “fully available” before domain is end-to-end	Forbidden	VERSIONING honesty rules
LLM keys in client bundles	Forbidden	Security + ADR-006
Autonomous AI write without Apply	Forbidden	Trust & audit posture

5. Plan packaging — features by commercial plan

Source of truth for switches: src/config/entitlements.ts + src/types/entitlements.ts

Prices: src/lib/paystackPlans.ts / LAUNCH_PRICES_ZAR (env-overridable)

Seats / storage: docs/ACCESS_MODEL.md, src/config/mediaQuotas.ts, src/lib/orgSeats.ts

5.1 Catalogue (launch)

Plan	Price (ZAR/mo excl. VAT)	Who it is for	Seat model	Storage soft cap
Practitioner	R5,399	Solo SRM / consultant / small desk	Owner only (0 juniors)	25 MB
Project	R14,999	Active project / site team	Owner + juniors	250 MB
Institutional	Contact sales	Multi-project / public sector / enterprise	Custom	2 GB soft

Trial: 14 days; default Paystack path `trial_authorize` (small verify charge, bill day 14) — ADR-025.

5.2 Capability matrix (what to package)

Capability	Practitioner	Project	Institutional	Notes for packaging
Dashboard / activity	✓	✓	✓	Core wedge
Projects	✓	✓	✓	Light PM — not full PMO
Incidents / grievance desk	✓	✓	✓	V001 sellable heart
Issue intake	✓	✓	✓	Field reporting
AI assist (suggest→apply)	✓	✓	✓	Never “auto-resolve” in sales
Geo intake / place fields	✓	✓	✓	ZA pack; not full GIS
Trust pulse	✓	✓	✓	Desk signal
Governance reports	✓	✓	✓	Pack depth differs (below)
Capture hub	—	✓	✓	V002 field evidence
Stakeholder CRM	—	✓	✓	SRM engine — do not undersell
Engagements	—	✓	✓	SI core
Commitments	—	✓	✓	SI core
ESG / intelligence cards	—	✓	✓	Illustrative until Stats SA
Desk graphs	—	✓	✓	
Supervisor queue	—	✓	✓	

Report packs (ADR-028):

Pack	Practitioner	Project	Institutional
Monthly	✓	✓	✓
Executive	—	✓	✓
Board presentation	—	—	✓

5.3 Sellable add-ons (typed)

From `src/types/entitlements.ts` — useful when a Practitioner needs one V002 slice without jumping to Project:

Addon	Grants
<code>addon_capture</code>	Capture hub
<code>addon_crm</code>	Stakeholder CRM
<code>addon_commitments</code>	Commitments + Engagements
<code>addon_esg</code>	ESG indicators
<code>addon_graphs</code>	Desk graphs + trust pulse

Addon	Grants
addon_supervisor	Supervisor queue

Packaging guidance:

1. **Practitioner** = resolution desk + light governance. Do **not** promise full SI registry as included.
2. **Project** = default “real SRM” SKU — desk + Stakeholder Intelligence modules.
3. **Institutional** = Project capabilities + board pack + commercial/custom (sales-led).
4. Keep **add-ons** for upsell; do not silently unlock Institutional-only toggles on lower plans (ADR-024).
5. Revisit prices only with evidence from Ops Finance + win/loss — matrix above is the feature switchboard.

5.4 What each plan should not include in the box (yet)

- Stats SA certified indicator feeds
- Live Grok-authored board packs without human apply
- Native offline app
- Unlimited Cloud storage (quotas exist for a reason — upgrade signal)
- Sample demo data as “your workspace”

6. Agent training brief (especially public-facing)

6.1 Identity & voice

- Product: **TrustLedger** — “Resolution you can audit.”
- Operator company (footer/ops only): Chibase Consulting — not a second product brand.
- Tone: clear, calm, institutional; Global South infrastructure & community trust.
- Never invent features. If unsure, point to `/product` or `/ops/readiness` truth.

6.2 What to say (approved)

Topic	Approved line
What it is	TrustLedger helps operators run grievance resolution and Stakeholder Intelligence for projects where social licence decides whether work moves.
Version	Version 001 is the live resolution desk. Version 002 Stakeholder Intelligence (registry, engagements, commitments) is in active use on Cloud for entitled plans — still deepening vs full TEDS blueprint.
How to start	Start a 14-day trial (<code>/trial</code>) with your own data, or Subscribe (<code>/pay</code>). Learn features on <code>/product</code> .
	After provision, sign in at <code>/login/live</code> (email OTP when Resend is on).

Topic	Approved line
Live access	
AI	Suggestions only — a human applies before anything is saved.
Data	Paying / trial workspaces never show fictional sample incidents.

6.3 What never to say

- “Full ESIP / GIS editing / public portal available today.”
- “No signup needed sample desk” (retired).
- “AI closes cases automatically.”
- “Works offline as a native app.”
- Dual names (AccordBridge, Interserv as product host).
- Promising multi-device durable ops for unpaid browser-only trial without Cloud provision.

6.4 Objection handling (agents)

Objection	Response
“Is the CRM real?”	On Project/Institutional (or CRM add-on), stakeholders/engagements/commitments persist to Frappe Cloud when you are live. Trial keeps your own browser data until you go live.
“Can I try without paying?”	Yes — /trial for 14 days with your own projects; or assessment for readiness scoring.
“Where is the demo?”	Sample preview retired. Use /product for feature purpose, then trial or live.
“Mobile?”	Responsive web in the browser; no separate App Store app yet.
“Is GO LIVE done?”	Yes for operational grade (2026-07-23). Continuous improvement continues on SI depth and data feeds.

6.5 Internal agents (coding / ops)

Follow AGENTS.md: active packet only; DECISIONS locked; Design System; lint+build+changelog; Cloud host only; AI keys server-side; customer lists never mock-bleed.

7. Ongoing evaluation framework

Run this cadence. Record outcomes in docs/CHANGELOG_INTERNAL.md and adjust §4 / §5 of this brief.

7.1 Weekly (operator)

Check	Where	Pass criteria
Production health	/api/health	ok: true; launch gates expected
Readiness ladder	/ops/readiness	No unexpected regressions
Sign-in smoke	/login/live	OTP email arrives; session opens
SI smoke	/ops/accounts	Ensure DocTypes + Stakeholder→Engagement→Commitment smoke
Lead forms	assessment/contact/quote	Submissions land in CRM/Ops activity

7.2 Monthly (product + commercial)

Question	Method	Outcome feeds
Which capabilities are used?	Ops activity + customer interviews	Plan matrix tweaks
Where do buyers stall?	Funnel: /product → /trial//pay → live	UX packets
What support tickets repeat?	/ops/issues + Resend	Fix vs discontinue
Is TEDS % moving?	tedsMaturity.ts / Executive Board	Roadmap priority
Are quotas hitting upgrades?	Media meters / seat caps	Price or limit changes

7.3 Scorecard template (copy per review)

Date:

Reviewer:

Health SHA:

TEDS MVP % (from app):

Keep (working):

Improve (next 1–2 packets):

Not ready (do not sell):

Discontinue / defer:

Plan packaging changes proposed: none / list

Agent script changes proposed: none / list

8. Future of the platform — upgrades & additional features

Prioritise by **SRM engine strength** and **operational honesty**, not feature count.

8.1 Near-term (necessary upgrades)

1. **Buyer-verified Cloud SI** — empty CRM → create stakeholder → list from Cloud on Production.
2. **Copy hygiene** — remove leftover “demo” language from Capture/Projects/Settings.
3. **Continuous Cloud write** for projects/incidents (parity with SI BFF).
4. **Grievance Cloud stamps** on TL Incident.
5. **Doc sync** — maturity report, VERSIONING, PUBLIC_LAUNCH aligned to ADR-033 / GO LIVE.
6. **Cloud seats** for invitees (multi-device juniors).

8.2 Mid-term (high value)

1. Stats SA / socio-economic ingest on geo places.
2. Live Grok via `srm-core` (server-only) for stronger briefs — still suggest→apply.
3. CRM relationship graph, influence/interest matrices, merge/dedupe.
4. Report packs bound to live SI + geo evidence; export formats.
5. Ops packets 23b-d (filterable reports, deeper accounts, support packs).
6. Optional reCAPTCHA fail-closed when traffic warrants.

8.3 Later (V003+ — do not package as imminent)

- Public community portal
- Offline / native mobile
- Full GIS editing
- Marketplace / multi-tenant ISV channel
- Client co-branding as default Institutional export

8.4 Decision test for any new feature

Before building or selling:

1. Does it strengthen **resolution desk** or **Stakeholder Intelligence**?
2. Can it run on **Frappe Cloud** without browser-only dead ends for paying customers?
3. Is there a **plan switch** (entitlement) so packaging stays honest?
4. Can public agents explain it in one sentence without over-claiming?
5. What do we **discontinue** or defer to make room?

If three or more answers are “no,” do not ship in the current plan box.

9. Build-process lessons (front + back) worth keeping

Lesson	Practice
Packet-sized delivery	One active packet; changelog + lint + build
Demo proved UX; Cloud proved durability	Never confuse the two in sales
Entitlements before UI sprawl	Nav gated by capability ids
Ops ≠ customer	Separate /ops allowlist
Empty Cloud ≠ mock seed	Customer trust depends on this
Secrets in Vercel / Cloud only	Truncated keys with ... break login headers — paste full keys
Version honesty	001 desk live; 002 SI deepening; 003+ later
Design system locked	Field ledger — no generic AI purple/cream clichés
Human applies AI	Auditability is the product promise

10. Related documents (index)

Doc	Use
docs/BUILD_PLAN.md	Active packets & IA
docs/DECISIONS.md	Locked ADRs
docs/OPERATIONAL_DELIVERY.md	GO LIVE ladder history
docs/ROADMAP_V002.md	V002 priority order
docs/ACCESS_MODEL.md	Seats, Owner, entitlements narrative
docs/LAUNCH_WATCHLIST.md	First-days ops runbook
docs/PUBLIC_LAUNCH.md	Public posture (sync if drift)
docs/DESIGN_SYSTEM.md	Visual / UX law
docs/FRAPPE_API_CONTRACT.md	Method expectations for srm-core
docs/CHANGELOG_INTERNAL.md	What changed when
src/config/entitlements.ts	Plan feature switchboard
src/lib/tedsMaturity.ts	Living maturity scores
AGENTS.md	Coding agent rules

11. Maintenance of this brief

1. After every meaningful packet: update §4 statuses and §8 priorities; one line in `CHANGELOG_INTERNAL.md`.
2. After commercial packaging changes: update §5 and `src/config/entitlements.ts` together.

3. After public script changes: update §6 and train support/sales agents from this file only.
4. Quarterly: full scorecard (§7.3) with Executive Board / Ops.
5. If code and this brief disagree, **fix the brief within the same PR** that changes packaging or public claims.

End of brief — TrustLedger Platform Strategic Brief (living).
